

CHASE CONTEMPORARY

A PROPOSAL

REVENUE ENGINE

Systems architecture for smoother revenue generation,
AI readiness, query-based environments, and
operational excellence.

PREPARED FOR BERNIE CHASE

AUGUST 2026

NEW YORK · PALM BEACH · LOS ANGELES

THIS ISN'T BOTS.

No chatbot ever speaks to a collector. Nothing sends without a human's approval. This is systems architecture, built for three things:

SMOOTHER REVENUE GENERATION

Every inquiry captured, owned, and answered in minutes by a person armed with full context, with money accepted the way the collector wants to pay.

AI READINESS, QUERY-BASED ENVIRONMENTS

The gallery's data structured so any question is a ten-second query, and so AI search engines cite Chase Contemporary when collectors ask where to buy its artists.

OPERATIONAL EXCELLENCE

SLAs, live dashboards, automated statements, one source of truth across three locations, fairs, and Artsy.

And the core business does not change. The program, the artists, the way the gallery curates and sells: untouched.

WHERE REVENUE DIES TODAY

Every deal starts when a collector presses **Inquire**, and that click becomes an email in a shared inbox. No one owns it, nothing measures how fast it was answered, and nothing follows up.

\$5k to \$1M+ ticket range across primary and secondary market	21x higher qualification odds at a 5-minute response vs. 30 minutes (industry study)
3 locations plus fairs and Artsy, with no unified customer record	0 automated follow-ups after an unanswered inquiry today

At these ticket sizes, a single saved inquiry can pay for this entire build.

EIGHT WORKSTREAMS, ONE DATABASE

-
- W1** **EMBEDDED INQUIRY CAPTURE**
Forms on every artwork page, context attached automatically.
-
- W2** **ENRICHED LEADS, PIPELINE CRM**
Warm calls in minutes, with a full call card per lead.
-
- W3** **THE SQL BACKBONE**
One database of record: works, collectors, deals, money.
-
- W4** **CHECKOUT AND PAYMENT RAILS**
Card, ACH, wire, financing, holds. Fees engineered.
-
- W5** **PREMIUM SITE EXPERIENCE**
A conversion layer, not a reinvention.
-
- W6** **CRAWLABLE AND QUERYABLE BY AI**
Cited by AI search outward, plain-English queries inward.
-
- W7** **EMAIL FLOWS WIRED TO THE CRM**
New-work alerts, nurture, logistics updates. All human-approved.
-
- W8** **AUTOMATED COMMISSION ENGINE**
Splits computed on settlement, statements send themselves.
-

COLD CALLS BECOME WARM CALLS

Embedded forms replace the mailto. Each inquiry auto-attaches the artwork, price band, page journey, and source, then pings the sales floor by Slack or SMS in real time.

Enrichment runs on submission: identity, role, location, collector signals, prior history with the gallery. The salesperson opens a **call card**: who this is, what they asked about, what they've bought before, comparable works to offer, recent auction results for the artist.

The CRM is a thin interface over the gallery's own database. Consignments, editions, and holds are native, not fought against. Every touch is logged.

ONE SOURCE OF TRUTH

A single database holds the whole business. Historical sales, invoices, and contact lists import first, because the engine is only as smart as its history.

Role-based access is built in: reps see their pipeline, directors see everything, artists see only their own statements.

Runs on managed Postgres. Artwork imagery, condition reports, and provenance documents live alongside the records.

MONEY, ON THE COLLECTOR'S TERMS

RAIL	BEST FOR	POLICY
Card	Editions, deposits, under \$25k	Fees priced in, never absorbed by accident
ACH	\$5k to \$150k, US buyers	The default push for mid-range
Wire	Large works, international	Auto-generated instructions, auto-reconciled
Financing	Entry and mid collectors	Widens the buyer pool
Payment links	Phone closes	Sent mid-call, the deal updates itself on pay

THE HOLD

A refundable deposit reserves a work for 72 hours. It converts "let me think about it" into a committed transaction, and "a hold has been placed on this work" becomes the most effective urgency line in the gallery.

VISIBILITY

WHAT BERNIE SEES

The payoff of one database is total visibility. Not month-end reports: live answers to the questions an owner actually asks.

SALESPERSON	RESPONSE	CLOSE RATE	REV · 90D	DISCOUNT
Rep A	4 min	6.1%	\$412k	3.2%
Rep B	22 min	4.4%	\$298k	7.8%
Rep C	3.1 hrs	2.0%	\$121k	9.1%

Illustrative data. The top-salespeople board: who answers fastest, who closes, who discounts. The floor manages itself when everyone can see it.

WHAT'S MOVING, AND HOW

Sales velocity by artist, medium, and price band. Days on market per work. View-to-inquiry rates. Works drawing interest but not converting.

PIPELINE HEALTH

Stage conversion, SLA breaches, holds expiring in 48 hours, deals aging without a next touch. Each one a name and a number, not a vibe.

MONEY AND SOURCES

Settled vs. outstanding, commissions accruing in real time, revenue by source so spend follows what actually closes.

THE WINNING SCRIPT

Once the board holds real data, study what the top closer actually does differently: how fast they respond, their talk track, when they offer the hold or the financing option, how they follow up.

1 • MEASURE

Close rates, response times, and outcomes per rep, from logged activity and, where consent allows, recorded calls.

2 • EXTRACT

Codify what the best closer does into the house playbook.

3 • DEPLOY

Train the whole floor on it. Humans train humans.

4 • VERIFY

The same board proves the lift. Repeat every quarter.

The best salesperson's craft stops being tribal knowledge and becomes the gallery's operating standard.

THE EXPERIENCE LAYER

A PREMIUM SITE, PHASED IN

Museum-grade presentation to match the inventory. Embedded forms arrive first on the current site; the fuller design upgrade lands in Phase 3. A conversion layer, not a reinvention.

CRAWLABLE AND QUERYABLE BY AI

Outward: structured data on every work, so when a collector asks an AI where to buy a Kenny Scharf, Chase Contemporary is the cited answer. Inward: plain-English questions over the database, like "collectors who bought street art under \$50k in the last three years near Palm Beach." Ten seconds, and that's the next fair's invite list.

EMAIL FLOWS WIRED TO THE CRM

New-work alerts matched to each collector's taste. Nurture sequences on unclosed inquiries. Logistics updates after purchase: paid, crated, insured, shipped with tracking, delivered. Purchase anniversaries and artist market updates that bring collectors back. Every send drafted by the system, approved by a person.

COMMISSIONS, FULLY AUTOMATED

A rules table holds every split: artist consignment terms, rep commission, house and location shares, discounts shared pro-rata.

The moment a payment settles, including installments and partials, commission rows compute themselves. Artist statements and rep statements generate and send monthly. Everyone sees their live numbers on a dashboard.

No month-end spreadsheet archaeology. No disputes. Reps who trust the number push harder.

The same engine tracks discounting per rep, artist, and deal. Galleries commonly leak margin here, and leakage made visible is margin recovered.

WEEK-ONE WINS

Shipped in days, before the engine is even built. Little or no code, zero change to how the gallery works.

-
- 01

INSTANT ACKNOWLEDGMENT · DAY 1
Every inquiry pings the floor and the collector gets a reply with a booking link, in minutes.
-
- 02

INBOX ARCHAEOLOGY · DAYS 1 TO 3
Export the inquiry history, then a revival campaign to every dead inquiry. The cheapest win in this plan.
-
- 03

PAYMENT LINKS AND WIRE TEMPLATES · DAY 2
Reps take money mid-call this week.
-
- 04

THE HOLD, AS AN MVP · DAY 2
A refundable deposit link plus a one-paragraph policy.
-
- 05

FOLLOW-UP CADENCE · DAY 3
Day 0 / 2 / 7 / 21 templates, a named owner on every inquiry.
-
- 06

ONE PIPELINE, EVERY SOURCE · WEEK 1
Artsy, shop, walk-ins, and fairs land in one shared table.
-
- 07

EMAIL CAPTURE + SEO PASS · WEEK 1
First-access signup on the current site; structured data so works become indexable and AI-citable.
-

THE REVIVAL EMAIL, DRAFTED

FROM [Rep], Chase Contemporary
SUBJECT The [Artist last name] you inquired about

Hi [First name],

You reached out a while back about *[Artwork title]* by [Artist]. It is still with us, and honestly it remains one of the strongest works from that series, so I wanted to come back to you before the fall calendar picks up.

I can send fresh images and a condition report, or set up a private viewing at [location] whenever suits you. If it helps, I can also place a courtesy hold for 72 hours while you sit with it.

And if the timing was simply off, no trouble at all. Tell me what you are collecting these days and I will keep an eye out for you.

Warm regards,
[Rep first name]
Chase Contemporary, [location]

Drafted by the system from real data: inquiry date, artwork status, artist news. Approved and sent by the rep who owns the relationship. Never a blast.

THREE PHASES, FIRST WINS IN DAYS

STOP THE LEAK

WEEKS 1 TO 3

Embedded forms, the database core, automatic enrichment, the pipeline CRM with call queue, instant alerts to the sales floor.

Payoff: speed-to-lead in minutes and zero dropped inquiries.

TAKE THE MONEY

WEEKS 3 TO 8

Card, ACH, wire and financing rails. Holds and deposits. Payment links and automated invoicing. Full historical import. Lifecycle email flows go live.

Payoff: collectors commit the moment intent peaks, on whatever rail suits the ticket.

COMPOUND

WEEKS 8 TO 16

The premium site upgrade, the AI layer, the automated commission engine, dashboards and the winning-script loop at full depth.

Payoff: every sale, collector, and consignment makes the next one easier to close.

MEASURED BEFORE PROMISED

An honest model, not a forecast. Every number below is a placeholder until it is replaced with the gallery's real ones, and building that measurement is the first thing Phase 1 delivers. Today, none of these numbers are knowable at all.

Working assumptions to calibrate together: ~120 inquiries a month across web, Artsy and fairs; ~3% close rate today; ~\$18k average realized deal.

LEVER	MECHANISM	IF ASSUMPTIONS HOLD
Speed-to-lead, structured follow-up	Close rate 3% to 5%	+\$43k / mo
Holds, deposits, financing	+10% deal volume	+\$6 to 10k / mo
Lifecycle email	Repeat purchases, reactivations	+\$20 to 40k / mo at scale
Editions self-serve	Entry buyers become originals buyers	Upside, unmodeled

If the assumptions hold, that is directionally \$0.8M to \$1.5M in incremental annual revenue. We treat it as a hypothesis to test, not a promise. The commitment is the measurement, and the mechanisms that make the numbers move.

ONE ENVIRONMENT, BUILT TO LAST

EXPERIENCE

The site and embedded forms, the existing shop kept and integrated, the CRM the team lives in.

APPLICATION

Payments, financing, enrichment, lifecycle email, sales-floor alerts, fine-art logistics, accounting sync. Every arrow a webhook, nothing re-typed by hand.

DATA

One database of record with role-based access, imagery, and provenance.

AI OPERATIONS

One operating file governs every AI the gallery uses: the systems map, the hard rules (nothing sends without approval, no AI ever quotes a price-on-request work, collector data never leaves), the playbooks. Any AI, today's or next year's, plugs in on day one: immediately useful, immediately safe.

Competitors have an inbox.

Chase Contemporary will have an operating system.
